Website Projects Documentation

Source-based documentation for three standalone HTML/CSS pages

1. Project Overview

The supplied source files define three separate static web pages. HTML provides the content and structure; embedded CSS controls layout and appearance. This document describes behavior visible in the supplied source and does not assume a backend or unimplemented features.

Project	Purpose	Key sections
Personal Portfolio	Present student background and work	Profile, education, skills, hobbies, projects, achievements, resume, contact
Online Shopping	Show a product storefront mockup	Navigation, offer banner, product cards, contact
Student Dashboard	Summarize academic information	Student details, results, attendance, exams, announcements

2. Personal Portfolio Website — abl1.html

Purpose and structure. Introduces a student and organizes profile, education, technical skills, hobbies, projects, achievements, resume access, and contact details. A sticky navigation bar links to page anchors. Content is grouped into centered white panels with rounded corners and shadows.

Styling. Uses Arial, a light gray background, dark slate header, midnight-blue navigation/footer, hover color changes, and a circular profile image style.

Dependencies and limitations. References **student.png** and **resume.pdf**, which were not included with the supplied HTML. It is a static page with no form submission or dynamic data behavior.

3. Online Shopping Website — abl2.html

Purpose and structure. A storefront mockup with header, Home/Products/Offers/Contact navigation, a promotional banner, a three-column product grid, and a contact panel. Product cards lift on hover; buttons change color on hover.

Displayed products. Headphones (■800, 20% discount, four-star display), Wristwatch (■1,200, 10% discount, five-star display), and Shoes (■1,500, 15% discount, four-star display). These are static page values, not verified live offers or inventory.

Dependencies and limitations. References **abl2 img-1.jpg.webp**, **abl2 img-2.jpg.webp**, and **abl2 img-3.jpg.webp**, which were not included. Shop Now buttons have no click handler, cart, checkout, payment, or inventory logic.

4. Student Academic Dashboard — abl3.html

Purpose and structure. Displays student identity details, marks/grades, attendance percentages, exam dates, and announcements. Sidebar links navigate to each section. Student details use cards, results and exams use tables, and attendance is shown with progress bars.

Content in source. The results table lists Web Development (85, A), Computational Mathematics (90, A+), and Python (80, A). Attendance values are 85%, 90%, and 75%. Exams are listed for 10, 12, and 15 November 2026. Announcements cover assignment deadlines, November exams, and attendance.

Styling and limitations. Uses Flexbox for the main layout, CSS Grid for detail cards, striped table rows, shadows, and green progress bars. No login, editing, backend, persistence, or data validation is defined. No explicit mobile breakpoints are included.

5. Shared Technical Notes

Technology. HTML5 and embedded CSS3; no imported framework, JavaScript library, or external API appears in the supplied source.

Run locally. Keep each HTML file and its referenced assets together. Open the file directly in a browser, or run **python -m http.server 8000** in the folder and visit **http://localhost:8000/abl1.html**, **/abl2.html**, or **/abl3.html**.

Before publishing.
- Add missing image and resume assets or update their paths.
- Test navigation and keyboard access.
- Add responsive CSS breakpoints for small screens.
- Review student/contact information before public deployment.
- Implement shopping/cart behavior if required; the current page does not provide it.

6. Deliverables

README.md provides the project guide. screenshots.pdf contains a rendered capture of each page. This document records each page's purpose, structure, styling, asset dependencies, and current limitations.

Prepared from the three HTML files supplied in this conversation.
